

Says

What have we heard them say?
What can we imagine them saying?

Thinks

What are their wants, needs, hopes, and dreams?
What other thoughts might influence their behavior?

Visual over verbal: "Without visuals, it's hard to explain my style."

Aesthetic self-doubt: "Not sure if I'm at *that* level of aesthetic."

Language/Expression barriers: Finding it difficult to translate nuanced cultural or personal meanings into text/speech (e.g., struggling with English approximations for specific terms like "청순하다" / innocent)

Reference-based identities: Describing their own personal vibe or aesthetic directly through comparisons to public figures, media trends, or established subcultures (e.g., "Kimjiwon / chic / girlish" or "Clean girl / classy vibe").

Updated User Needs Statement:
A trend-conscious Gen Z digital native needs a way to consolidate their fragmented digital footprint (across social media, screenshots, and notes) into a singular visual output, because relying on text descriptions and rigid labels fails to capture the true essence of their personal identity.

Context matters (TPO):
They think about style contextually based on Time, Place, and Occasion (e.g., changing from a casual "student denim vibe" to professional "office looks").

Algorithm-awareness: They recognize that their taste profiles are constantly manipulated or modified by system changes (e.g., "the algorithm changes based on what I save/like") rather than strictly organic shifts.

Desire for validation:
They value external feedback and like when their choices align with social groups or are confirmed by a professional style consultant.

Inspiration vs. Implementation: Believing that finding something "pretty" on an algorithmic feed doesn't instantly translate to personal identity until they evaluate its day-to-day usability ("things I would wear often").

Digital Native

Gen Z digital native,
actively curating
visual inspiration

Fragmented curation:
Actively saving inspiration across fractured platforms—using Instagram Reels, TikTok, and screenshotting items to individual notes or camera rolls.

Note-taking behavior:
Maintaining highly specific digital logs (e.g., creating lists for places to go, upcoming brand products, or shopping lists) to memorize items.

Impulsive digital discovery: Making quick, impulse saves directly from algorithmic video feeds (Instagram/TikTok Reels) just because something looks visually appealing.

Real-world testing:
Seeking out physical validation before buying clothes ("must try it on irl").

Frustrated by text constraints: Feeling restricted and annoyed when forced to articulate a multidimensional, creative style identity using only text fields or words.

Validated by connection: Feeling comfortable and happy when friends dress with similar tastes, or when external feedback thankfully confirms their styling direction.

Impulsive yet cautious:
Experiencing a rush during rapid online discovery, paired with a separate worry about whether an item genuinely fits their everyday life.

Self-conscious:
Feeling a sense of inadequacy or imposter syndrome when trying to claim a specific "level" of design or aesthetic identity.
